## ABOUT ME

I am developing of applications and sites using React and related technologies (Router, Redux, Thunk, Firebase). I know such programming languages as C ++ and Java. I am interested in computer science in general, I understand the algorithms and design patterns.

## SKILLS

| | | | |
|---|---|---|---|
| React | CSS | REST API | Express |
| SPA | Redux | Google Maps API | Web Socket |
| Java Script (ES6+) | Thunk | Firebase API | Git |
| OOP | Styled Components | MongoDB API | Github |
| HTML | Jest | Telegram API | Webpack |

## EDUCATION

| | |
|---|---|
| 2001 - 2006 | Kryvyi Rig Technical University (Master of technology) |
| 2008 - 2011 | Kryvyi Rig Technical University (Master`s degree, business economist) |
| August 2019 | Online course "Udemy: Yuri Bura React + Redux - professional development" |
| September 2019 | Online course "Webformyself: React from scratch to professional" |
| October 2019 | Online course "Dmitry Lavrik: React. Intensive course from professional" |
| December 2019 | Online course "Microsoft: Introduction to React JS" |
| January 2020 | Online course "CS50's: Web programming with Python and Java Script." |
| March 2020 | Online course "MERN - Reducing Links from Zero to Deploy (Mongo, Express, React, Node)" |

## EXPERIENCE

Personal website development.(used technologies: React, Router, Firebase, Github pages)

Development of an application that implements integration of browser chat on a web socket with Telegram via a heroku server (used technologies: node.js, express, web socket, telegram API, native JS)

Test execution of React + Redux developer (used technologies: React, Redux, Styled Components, HTML5, Intersection Observer)

Work on a training project in which a REST API server is created on express and a client application on React interacting with the server. The server has user registration and authorization using the JVT token, a remote MongoDB database is connected to the server (used technologies: React, Redux, REST API, Express, JVT, MongoDB API)

Test task for JS developer position. (used technologies: React, Google maps API)

Developing an application that displays a list of "New Mail" branches in a selected city. If you select a branch, it displays detailed information and a location on the map. (used technologies: React, Google Maps API, New Mail API, Redux)

Creating a pet-application that implements, in addition to the basic functionality, registration and authorization on the server, separation of user rights, change of application language.(used technologies: React, REST API)

* Links to all works and source code can be found here: https://react-dev.ml in the "Portfolio" section.

## ADDITIONAL

English: pre-intermediate
